

SETH Short Ether Strategy ETF

Why SETH ?

- The fund provides an opportunity to profit when the daily price of ether declines
- SETH can be bought through a traditional brokerage account
- Avoid significant costs and fees typically required to short ether

Fund Objective

ProShares Short Ether Strategy ETF seeks daily investment results, before fees and expenses, that correspond to the inverse (-1x) of the daily performance of the Bloomberg Galaxy Ethereum Index.

SETH invests in ether futures and does not invest directly in ether.

Fund Performance and Index History

Daily Return During 1Q 2024

— Short Ether Strategy ETF (SETH) — Bloomberg Galaxy Ethereum Index

The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be more or less than the original cost. Shares are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Market price returns are based upon the midpoint of the bid/ask spread at 4 p.m. ET (when NAV is normally determined for most funds) and do not represent the returns you would receive if you traded shares at other times. Your brokerage commissions will reduce returns. Current performance may be lower or higher than the performance quoted.

For standardized returns and performance data current to the most recent month end, call 866.776.5125 or visit ProShares.com

¹Expenses with contractual waiver through 10/31/24.

Investors could potentially lose the full value of their investment within a single day.

Benchmark Description

The Bloomberg Galaxy Ethereum Index is designed to measure the performance of a single ether traded in USD and seeks to provide a proxy for the ether market. The Index price is a composite of U.S. dollar-ether trading activity on certain digital asset trading platforms which have been evaluated based on criteria including governance, liquidity, and data integrity. The digital asset trading platforms included in the Index are reevaluated quarterly. The Index is constructed and maintained by Bloomberg Index Services Limited and is co-branded with Galaxy Digital Capital Management LP.

Benchmark Characteristics

Volatility⁵ 63.77%

Daily Performance of SETH vs. Benchmark During 1Q 2024

Fund Holdings⁴

Description	Value	Market Exposure
Net Other Assets (Liabilities)	\$1,882,476	--
Total	\$1,882,476	0%

The fund obtains exposure to ether through entering into ether futures contracts. The assets of the fund are held in cash or invested in short-term cash instruments, including Treasury Bills.

²"Correlation" is a measure of the strength and direction of a linear relationship between two variables.

³"Beta" is a measure of the slope, which is the steepness of the line drawn through the fund return vs. the benchmark return on a daily basis.

⁴Holdings are subject to change.

⁵"Volatility" refers to annualized standard deviation, a statistical measure that captures the variations from the mean of an index's returns and is often used to quantify the risk of the index over the specific time period. The higher the volatility, the more an index's returns fluctuate over time.

Investing involves risk, including the possible loss of principal. There is no guarantee that ProShares Short Ether Strategy ETF (SETH) will achieve its investment objective.

The ProShares Short Ether Strategy ETF seeks daily investment results that correspond, before fees and expenses, to the inverse (-1x) of the daily performance of its underlying benchmark - the S&P CME Ether Futures Index (the "Daily Target"). While the Fund has a daily investment objective, you may hold Fund shares for longer than one day if you believe it is consistent with your goals and risk tolerance. For any holding period other than a day, your return may be higher or lower than the Daily Target. These differences may be significant. Smaller index gains/losses and higher index volatility contribute to returns worse than the Daily Target. Larger index gains/losses and lower index volatility contribute to returns better than the Daily Target. The more extreme these factors are, the more they occur together, and the longer your holding period while these factors apply, the more your return will tend to deviate. Investors should consider periodically monitoring their geared fund investments in light of their goals and risk tolerance.

This ETF invests in ether futures contracts and does not invest directly in ether. Ether and ether futures are a relatively new asset class and the market for ether is subject to rapid changes and uncertainty. Ether and ether futures are subject to unique and substantial risks, such as rapid price swings and lack of liquidity, including as a result of changes in the supply of and demand for ether and ether futures contracts. Ether is largely unregulated and may be more susceptible to fraud and manipulation than more regulated investments. The value of an investment in the ETF could decline significantly and without warning, including to zero.

The costs associated with rolling (buying and selling) futures and the impact of margin requirements, collateral requirements and other limits may have a negative impact on performance and prevent the Fund from achieving its objective. The price and performance of ether futures should be expected to differ from the current "spot" prices of ether (the prices of ether that can be purchased immediately). These differences could be significant.

This ETF is non-diversified and is subject to risks associated with the use of futures contracts, imperfect benchmark correlation, leverage and market price variance, all of which can increase volatility and decrease performance. The Fund should lose money when the daily price of ether futures rises. Shares of any ETF are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Your brokerage commissions will reduce returns.

Carefully consider the investment objectives, risks, charges and expenses of ProShares before investing. This and other information can be found in the ETF's summary and full prospectuses. Read them carefully before investing. Obtain them from your financial professional or visit ProShares.com.

Shares of any ETF are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Brokerage commissions will reduce returns.
