See back of form for additional guestions. Part II Describe the organizational action and, if applicable, the date of the action or the date against which shareholders' ownership is measured for the action ► Effective as of the close of business on November 6, 2024, shares of ProShares Ultra Healthcare ETF underwent a 2:1 share split. The split decreased the fund's price per share by a factor of 2 with a proportionate increase in the number of shares outstanding. As a result, shareholders received 2 post-split shares for every 1 pre-split share held. Post-split shares were priced 0.5 times lower than the net assets value ("NAV") of a pre-split share. Shares began trading at post-split prices on November 7, 2024. Describe the quantitative effect of the organizational action on the basis of the security in the hands of a U.S. taxpayer as an adjustment per share or as a percentage of old basis Each post-split share has a tax basis equal to 0.5 times the tax basis of a pre-split share (50% of old basis). Describe the calculation of the change in basis and the data that supports the calculation, such as the market values of securities and the valuation dates ▶ Post-split (new) basis per share = pre-split (old) basis per share times 0.5. For example, a shareholder with 100 pre-split shares with a basis of \$10.00 per share at the close of business on November 6, 2024, would receive 200 post-split shares with a basis of \$5.00 per share. While the basis per share is impacted, the basis of the shareholder's total investment remains unchanged. Further, because the NAV per share decreases by a factor of 0.5, the value of a shareholder's investment is not impacted by the share split.
